30. As to claim 35, Barton discloses the method comprising:
receiving at least one function call (*a programming command*) from a first network (*an Internet to the web server 200 in the personal TV service center 130*) including a client device (*a remote computer 155 or PDA 160*) for receiving a user request from the user (*Fig. 4, steps 400, 410, receiving user access request to a special web site, [0044]-[0045]*);

Art Unit: 2142

in response to the at least one function call, executing at least one API routine (*Fig. 2, dispatch process 240, [0040]-[0041]*) to retrieve from at least one database concerning the media-based device, the at least one database being in communication with the media-based device through a second network (*Fig. 1, a communication channel 140*); and

Claim Rejections - 35 USC § 103

36. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

Art Unit: 2142

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

37. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over **Barton** as applied to claim 2 above, and further in view of **Sull et al. US 2006/0064716 A1**.

38. As to claim 6, Barton does not explicitly disclose, wherein the information in accordance with the retrieved data is transmitted in XML format.

In the same field of endeavor, Sull discloses the information in accordance with the retrieved data is transmitted in XML format ([0098]-[0101]).

Accordingly, it would have been obvious to one of ordinary skill in the networking art at the time the invention was made to have incorporated Sull's teachings of transmitting information in XML format with the teachings of Barton, for the purpose of *enabling the effective and efficient access (search, filtering, and browsing) to multimedia content (Sull, [0101])*.
